DASHBOARD_GLOBAL TUBERCULOSIS REPORT (1990-2013)

TB (all forms) prevalence per 100,000 population - 1990

Estimated preva...
0 1,762
Year
1990
☐ Show history

The global burden of TB per 100 000 population (1990 - 2013)

Case detection rate is inversely proportional to incidence/mortality rates

Spatio-temporal TB prevalence (1990-2013) - 1990

LHL Project STORY

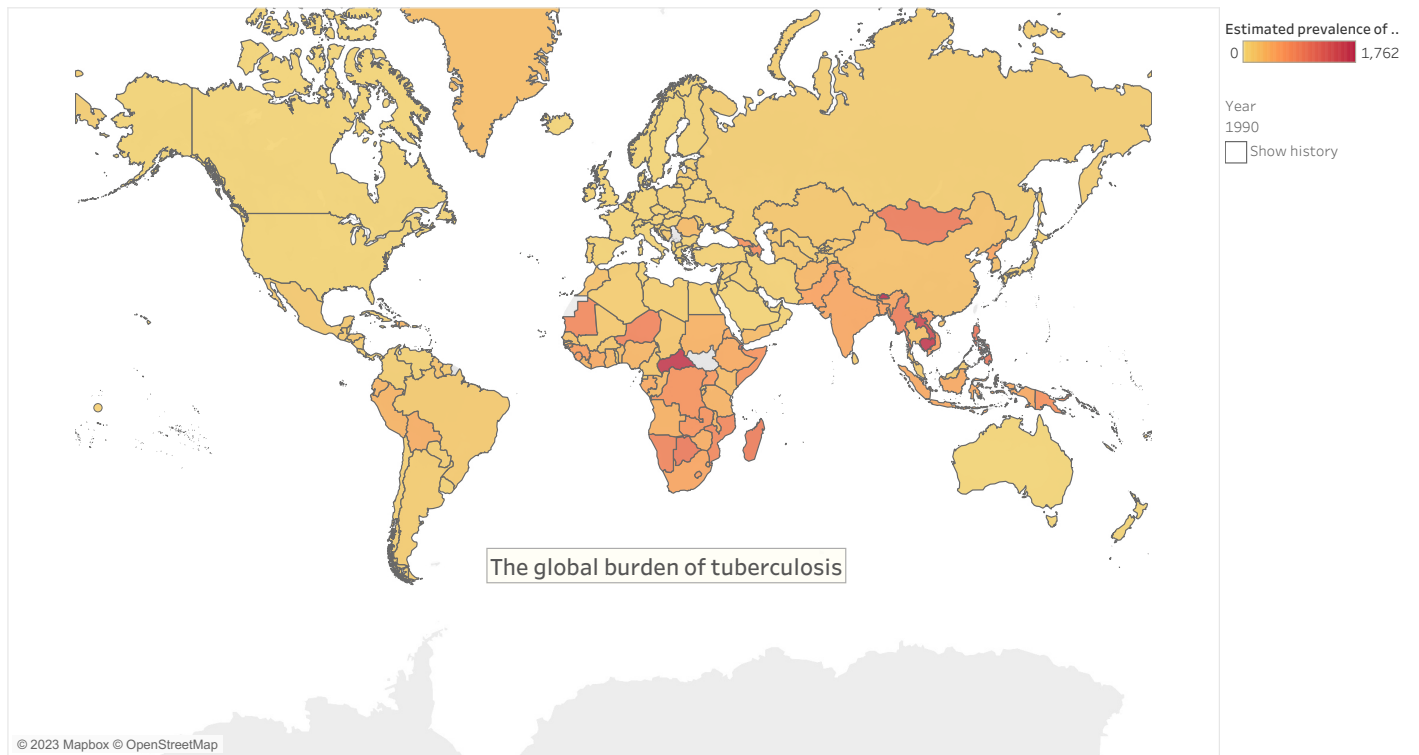

Title Page	Interactive Dashboard	Outline	1. Epidemiology of Tuberculosis	2. Annual burden of TB	3. High burden countries	4. When actual population density w..	5. Most new cases were in AFR and SEA
------------	-----------------------	----------------	---------------------------------	------------------------	--------------------------	---------------------------------------	---------------------------------------

Outline

- The dataset estimates the global prevalence and mortality of tuberculosis between 1990 and 2013.
 - The dataset (a .csv) file has nine dimension values and 41 measures
 - The datatypes include strings and maps
 - Five calculated fields created

Inferences

Future Perspectives

1. TB is almost globally spread

2. Decline in TB-associated prevalence/mortality/new cases. Intervention measures may be yielding result.

3. Increased global attention on TB control in AFR and SEA where disease burden is highest

4. Case detection rate inversely proportional to TB prevalence
